

EXPERIMENT 7A

Develop low-fidelity paper prototypes for a banking app and convert them into digital wireframes using Inkscape

NAME:HEMASHREE R

ROLL NO:240701190

AIM:

To design low-fidelity paper prototypes for a banking application and convert them into digital wireframes using Pencil Project.

TOOLS USED:

- Pencil Project (for digital wireframing)
- A4 Sheets (for paper prototyping)
- Pencil & Eraser
- Computer/Laptop

PROCEDURE:

1. Login Page:

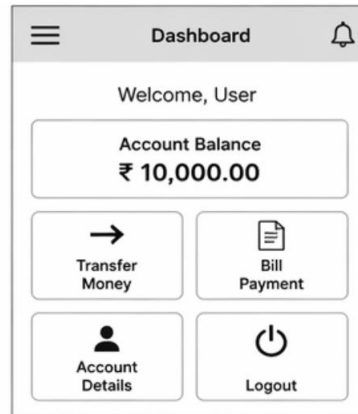

This page allows the user to enter their credentials (username and password) to access the banking application. It includes input fields and a login button for authentication.

The wireframe shows a mobile app login screen. At the top is a header bar labeled "Bank App". Below the header is a circular icon containing a stylized building. Underneath the icon are two input fields: the first is labeled "Username" with the placeholder text "Enter username", and the second is labeled "Password" with the placeholder text "Enter password". Below these fields is a grey rectangular button labeled "LOGIN". At the bottom of the form is a link labeled "Forgot Password?" in blue text.

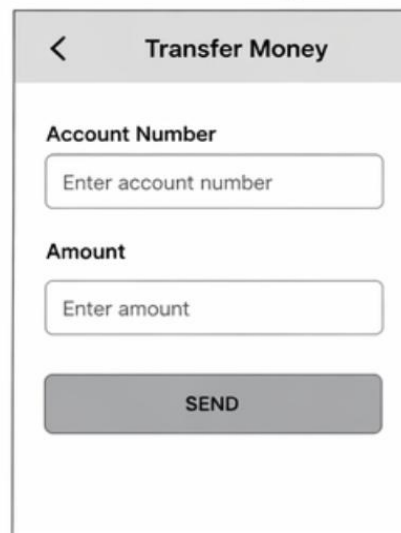

2. Dashboard Page:

This is the main screen of the application. It displays the user's account balance and provides options like money transfer and bill payment for easy navigation.

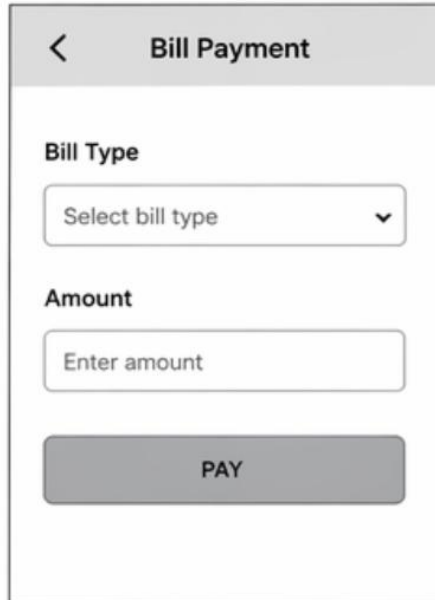

3. Transfer Page:

This page enables the user to transfer money by entering the recipient's account number and the amount. A send button is provided to complete the transaction.

4. Bill Payment Page:

This page allows users to pay bills by entering details such as bill type and amount. A pay button is used to confirm the payment.

The wireframe shows a mobile application screen for bill payment. At the top, there is a header bar with a back arrow on the left and the title "Bill Payment" in the center. Below the header, the form is organized into two main sections. The first section, labeled "Bill Type", contains a dropdown menu with the placeholder text "Select bill type" and a downward-pointing chevron icon. The second section, labeled "Amount", contains a text input field with the placeholder text "Enter amount". At the bottom of the form is a large, dark gray button with the text "PAY" in white, centered.

RESULT:

Low-fidelity paper prototypes were successfully created and converted into digital wireframes using Pencil Project. The wireframes clearly represent the layout, structure, and navigation flow of a banking application.
